

Individual Reflection

Name: Teboho Lekenno

Student No.: 1130992

Group No: 34

The project was completed by a team of 5 students from different disciplines. The team composed of 1 Electrical student, 2 Mechanical students, 1 Aeronautical and 1 Industrial student. Through this project the great experience of observing strength of other students from different disciplines was obtained.

Time management for the first week of the project was challenging due to different students being imposed to their different schedules to balance their studies. Therefore to merge the project within our schedules and to allow efficient and optimal working, a Google Drive folder was created a share amongst students which allowed the team to collaborate with tasks shared equally to ensure that all students gain skill and knowledge after the project completion.

It was observed during the group meetings that students had their own strengths and weaknesses, whereby different problem solving techniques arise and through proper research and observations a good solutions was always selected. Whatsapp social platform was employed for setting up of meetings that are not within the plan and to update each other on the status of the work we obliged to do.

The assignment was well constructed and managed to satisfy the requirements of every individual in the team. The efficiency in working was observed from the team, with consideration to the time constraints and the project requirements. Everyone in the group respected the role they entitled to and the group members as well.
